WORK EXPERIENCE

Software Engineer - Backend Grab

08/2021 - Present

Bengaluru

Achievements/Tasks

- Led and delivered **PRERIDE checkpoint** which handles the complete activity from the moment a ride is booked to it's completion/cancellation.
- Implemented **4 prediction models** which brought down the fraudulent transactions **by 14%**.
- Implemented **DB aggregations for 5 different checkpoints** which helped analysts to write rules and understand the risk associated with the transactions.

Software Engineer Moonfrog Labs

04/2021 - 08/2021

Achievements/Tasks

- Implemented **Firestore Analytics** event logging which logs a custom event when the user makes his first payment.
- Implemented **Subscriptions feature** which grants special benefits to users on purchase.

Software Development Engineer Dell Technologies

02/2019 - 04/2021

Bengaluru

Achievements/Tasks

- **Led and Delivered an Angular-Java-Spring application** which allows users to recover their endpoints, without any dependency on the Admin. The app reduced significant workload on admin as the recovery can be done directly by the user.
- **Led and Delivered the complete JavaMail feature** - Admin can schedule and receive all important reports and notifications on his email periodically without logging into the system.
- **Migrated UI from Angular.js to Angular 6** - With the support for Angular.js expiring a complete revamp of the UI was done. Migrated around 20-25 components.
- **Implemented Password Policies for End User** - Added a set of 7 password policies to the existing set of policies and Added custom validations across Policy Module having 100+ policies and 12 different types.
- Developed a Webapp which could automatically **validate your API against it's openAPI specification**. Containerized the app using **Docker** which **reduced manual effort** of validating each API.

Freelancer(Part time) Sakuni Techie Minds Pvt. Ltd.

06/2020 - 02/2021

India

Achievements/Tasks

- **Created a React application** for admin to login and manage all the users, monitor daily stats.
- Migrated the backend on the product from Firebase to **Node.js**.
- **Implemented CI/CD for both Client App and Admin app** which would test the changes on every commit and then push the changes to **Amazon S3 buckets**.
- **Created new schema** and migrated product's database from Firebase to **Amazon RDS**.
